# What does KYND ON do?

- The dial numbers on your KYND ON dashboard represent the number of individual risk factors that KYND has discovered, prioritised into Red, Amber and Green
- KYND ON's Priorities highlight risks that will be considered by external organisations in insurance, investment or vendor due diligence decisions
- With its user-friendly questionnaire, you can easily assess your organisation's internal security posture to ensure the right measures are in place
- Sites and certificates risk monitoring provides insights into your Internet domains and the health of the security certificates being used
- Email security analysis identifies the impersonation, spoofing and business email compromise risks that could impact your organisation
- KYND Data Breach Protection ensures you are alerted if any risks to sensitive or confidential data are identified
- If your company uses Microsoft product, connect KYND ON to Microsoft Secure Score for additional analysis of Cloud Security Risks
- KYND ON provides the comparative cyber risk profile of your organisation versus your peers to support benchmarking and improvement
